Description of Property and Eligibility Determination: *(Use continuation sheet if necessary and attach map and photo)*

The water towers at Fort Meade were constructed between 1928 and 1955. The water towers were constructed across the installation with no apparent plan. Two water towers are associated with the Camp Meade period and the transition to a permanent installation. Two water towers are associated with World War II mobilization construction. The fifth water tower was constructed in 1955. This water tower is located near a family housing area. Construction of this water tower predated the housing area, which was built in 1959.

Water Tower 3 (WT003) was constructed in 1941. The structure is located east of Route 175 and north of Reese Road near the 1900 building area and the Sulphur Springs Cemetery. This location is some of the highest ground on Fort Meade. The water tower is not elevated and it has a capacity of 600,000 gallons of water. The water tower is a circular steel ground tank, with a flat steel roof, that sits on a concrete platform. The water tower was constructed near a complex of WWII temporary wooden buildings, but majority of the temporary buildings have been removed. WT003 is located near the site of buildings related to the MISSILE MASTER NIKE system which was utilized at Fort Meade during the mid-1950's, and is also near modern family housing units.

**MARYLAND HISTORICAL TRUST  
NR-ELIBILITY REVIEW FORM**

Continuation Sheet No. 1

AA-2373

Water towers are common features on military installations. They are primarily used to hold water for human consumption or fire fighting. Historically, water towers were frequently used to store water for agricultural or transportation uses. The water stored in the water towers at Fort Meade is potable.

WT003 was considered for NR eligibility in association with National Register Criteria A and C, but it was found that that it was not associated with events that have made a significant contribution in American history, it is not the work of a master, and it does not have distinctive characteristics.

### Capsule Summary

Water Tower 3 (WT003) was constructed in 1941. The structure is located east of Route 175 and north of Reese Road near the 1900 building area and the Sulphur Springs Cemetery. This location is some of the highest ground on Fort Meade. The water tower is not elevated and it has a capacity of 600,000 gallons of water. The water tower is a circular steel ground tank, with a flat steel roof, that sits on a concrete platform. The water tower was constructed near a complex of WWII temporary wooden buildings, but majority of the temporary buildings have been removed. WT003 is located near the site of buildings related to the MISSILE MASTER NIKE system which was utilized at Fort Meade during the mid-1950's, and is also near modern family housing units.

WT003 was considered for NR eligibility in association with National Register Criteria A and C, but it was found that that it was not associated with events that have made a significant contribution in American history, it is not the work of a master, and it does not have distinctive characteristics. The setting, feeling, and association of the tower have been altered. WT003 is not eligible for inclusion in the NRHP.
